

Q-20

- a):- char name;
- b):- int sum=0;
- c):- float product=1.0;

Q-21 Header files contains the function prototypes or function declaration, whereas the source code contains the constants, macros, system-wide global variables. Whenever we require the definition of a function, then we simply include that header file in which funct. is declared.

Q-22 Built in funct. that are grouped together and placed in a common location called library.

- ① Reads a character from file() writes a character to file. ② writes a character to file.
- ③ Reads string from a file.

Q-23 Yes;

Q-24 It will read two integers a & b (variable store them in variables a&b) if d is used if scanf to specify it should read integers

Q-25 \$ is not placed before variable.

Q-26 Comments are a great way to put some elements or description in a program. It can serves as a reminder on what the program is all about, or a description on why a

Certain code or function was placed there in the first place.

- for multi line comments:- /\* ended by \*/
- Single line comments:- // ended by //

Q-37 (i) gross-salary INTEREST,  
(ii) avg.  
(iii) thenisbookingapp
